SUMMARY

Builder of full-stack and data-driven applications who turns ideas into shipped software, from interactive web platforms to automated analytics tools. Fluent in Python, Java, and JavaScript, with hands-on experience in web development, REST APIs, backend systems, and data processing, and a track record of shipping real projects as part of a team.

EDUCATION

University of Texas at Dallas, Bachelor of Science in Software Engineering

Expected 2027

Relevant coursework: Data Structures & Algorithms, Programming with Python, Software Engineering, Software Development Lifecycle, Systems Programming in UNIX, Computer Architecture.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, HTML, CSS

Software Engineering: Object-Oriented Programming, Data Structures & Algorithms, REST API Integration, Backend Systems, Data Processing, Application Architecture, Debugging & Testing, Version Control (Git/GitHub)

Data & Productivity: Automated data analysis, anomaly detection, data cleaning and reporting; AI-assisted development with GitHub Copilot

Frameworks & Tools: Flask, Spring Boot, Pandas, Matplotlib, Swing, Maven, Git, GitHub, VS Code, IntelliJ IDEA, Figma

Web Development: Front-End Development, Responsive Web Design, UI/UX Design, Frontend and Backend Integration

EXPERIENCE

Global Career Accelerator Associate, The Global Career Accelerator

January 2026 - May 2026

Remote

- Shipped new features and redesigns across existing codebases using Git/GitHub and GitHub Copilot to accelerate routine development.
- Debugged and refactored code from a global engineering team, improving reliability and eliminating recurring errors.
- Translated A/B test results and PivotTable-driven analysis into clear, data-driven business recommendations.
- Prototyped and user-tested digital products with UX research methods to reduce friction and improve usability.

PROJECTS

Math Adventure, Interactive Web Application

January 2026 - May 2026

Team Software Engineering Project | Java Spring Boot, Web Technologies

- Built an interactive math-practice platform for students, owning frontend and Java Spring Boot backend integration within a collaborative engineering team.
- Shipped core features end to end: user login, grade-level selection, auto-generated math problems, and real-time student feedback.
- Drove the full lifecycle: requirements analysis, testing, debugging, and milestone-based delivery with GitHub for version control and code review.

InsightFlow, Data Analytics Dashboard & Full-Stack Platform

May 2026

Python, Flask, Pandas, HTML, CSS

- Designed an automated analytics engine that cleans, quality-scores, and analyzes CSV datasets, flagging anomalies with no manual review.
- Engineered auto-generated insights and PDF reporting that surface key patterns instantly, removing repetitive manual analysis.

Finance Tracker, Desktop Application

May 2026

Java, Swing, Maven

- Built a Java/Swing desktop finance app with transaction tracking, category organization, live balance monitoring, and an interactive GUI.
