SUMMARY

Software Engineering student (B.S., UT Dallas, May 2027) with hands-on Java, Python, and SQL experience building and testing backend services, database-driven applications, and data tools. Designed an 11-table PostgreSQL (Supabase) schema with row-level security for a live paid-membership product. Seeking remote or Plano-area QA/SDET, database/data analyst, or backend developer roles.

EDUCATION

The University of Texas at Dallas — B.S. in Software Engineering Expected May 2027
Relevant coursework: Database Systems, Software Engineering, Programming with Python, Computer Architecture, Computer Graphics

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, C++, C#, HTML/CSS
Backend & Data: Spring Boot, Flask, REST APIs, PostgreSQL (Supabase), Pandas, Matplotlib, Excel (PivotTables)
Testing & Quality: JUnit, unit testing, debugging, A/B test analysis, data validation
Tools: Git/GitHub, IntelliJ, VS Code, Linux terminal, Render, Claude API

EXPERIENCE

Freelance Full-Stack Developer | Schicgirl™ (natural hair brand) | Remote Mar 2024 – Present

- Build and maintain bilingual (French/English) live web products — storefront, diagnostic tool, booking system, and AI assistant — in HTML/CSS/JavaScript, deployed on GitHub Pages.
- Designed a Supabase (PostgreSQL) backend with row-level security across 11 tables supporting a paid membership platform, private forum, and lessons studio.
- Built admin dashboards for leads and bookings with search, filtering, status tracking, CSV export, and backup/restore.

Associate | The Global Career Accelerator | Remote Jan 2026 – May 2026

- Analyzed datasets in Excel with PivotTables and advanced functions, and evaluated A/B test results to deliver data-driven recommendations.
- Debugged and refactored existing code projects with GitHub in a cross-functional team working in sprint timelines.

Transaction Processor | Conduent | Texas Jan 2023 – Jul 2025

- Processed high-volume financial transactions under strict accuracy and compliance standards, finding and resolving discrepancies to improve operational efficiency.

PROJECTS

Math Adventure — Spring Boot K–5 educational platform (team of 6; solo v2 rebuild) 2025

- Refactored static utility classes into Spring services with dependency injection and converted plain-text responses to JSON DTOs with correct HTTP status codes.
- Split a monolithic frontend into 8 ES modules and expanded JUnit test coverage for the rebuilt backend.

InsightFlow — CSV analytics tool (Python, Flask, Pandas) 2026

- Built a Flask web app and CLI that cleans messy CSV data (duplicates, missing values, outliers) and generates one-page PDF reports with summary statistics, charts, and plain-English insights.
- Refactored a monolithic script into reusable modules (cleaner, insights, reporter) and deployed it on Render.

TerraScape — Unity/C# procedural terrain sandbox (Computer Graphics, team of 5) 2026

- Implemented a fractal L-system engine and raycast-based object placement; set up a Git workflow that let 4 teammates contribute without scene-file conflicts.
