EDUCATION

The University of Texas at Dallas

B.S. in Software Engineering

Expected Spring 2027

Plano, TX

Relevant coursework: Data Structures, Software Engineering, Discrete Mathematics, Computer Architecture.

EXPERIENCE

Full-Stack Developer — Schicgirl™

March 2024 – Present

- Build and maintain a bilingual (FR/EN) natural-hair brand's entire front end — a dozen-plus live pages including a link-in-bio hub, sales pages, diagnostics, booking, and an AI assistant — all hand-written HTML/CSS/JS with no build step.
- Integrated the Anthropic Claude API to ship **CoilCare™ AI**, a conversational hair assistant with streaming responses, a custom prompt system, and persistent chat history.
- Built admin dashboards for nearly every tool (booking, hydration diagnostic, chat leads, product catalog, link-in-bio, freebie list) with SHA-256 authentication, usage analytics, and one-click GitHub publishing.
- Wired real backends behind a static site: Supabase for customer reviews, Google Apps Script + Google Sheets for lead capture, and self-hosted bilingual PDF delivery — all on GitHub Pages, no server to maintain.

Stack: HTML, CSS, vanilla JavaScript, Anthropic Claude API, Supabase, Google Apps Script, REST, localStorage, GitHub Pages, Git/GitHub.

SELECTED PROJECTS

InsightFlow — Python CSV-to-PDF Analyzer

insightflow-t50k.onrender.com

- Flask web app and CLI that turns a messy CSV into a one-page PDF report with summary statistics, charts, and plain-English observations.
- Refactored a single 500-line script into shared modules (cleaner, insights, reporter) reused by both interfaces.

Stack: Python, Flask, Pandas, Matplotlib, FPDF, Unicorn, Render.

Math Adventure — Spring Boot K-5 Math App

- Six-person Software Engineering course project; returned solo to rebuild the back end.
- Refactored static utility classes into Spring services with dependency injection, converted plain-string responses to JSON DTOs with proper HTTP status codes, and split one 635-line front-end file into 8 ES modules.
- Grew the test suite from 30 to 50 cases.

Stack: Java, Spring Boot, REST, JUnit, vanilla JavaScript.

Journal de Nabie — Mini-CMS in the Browser

- Personal blog with a hidden admin panel for writing, editing, versioning, and publishing articles without a redeploy.
- Implemented SHA-256 password hashing, 1-hour idle session timeout, and brute-force lockout for the admin.

Stack: HTML, CSS, vanilla JavaScript, localStorage, WebCrypto.

TECHNICAL SKILLS

Languages	Python, Java, JavaScript, HTML, CSS, SQL (basic)
Frameworks	Flask, Spring Boot, React (learning)
AI Tools	Anthropic Claude API, Claude Code, GitHub Copilot, prompt design (system prompts, few-shot, JSON mode)
Other	Git, GitHub, Supabase, Google Apps Script, Render, Pandas, Matplotlib, FPDF, Linux/macOS terminal

LEADERSHIP

Math Adventure — As one of six engineers on a Software Engineering course project, took the initiative to own and complete the back-end rebuild solo.
